U.S. Patent No. 6,283,232 (corresponds to EP-1 045 112) cited in the Search Report) discloses a rock drill.

European Publication EP-0965 405 A2 discloses a drill having an elongate stem with at least one helical groove for removal of drillings. At a stem end remote from the drill shank, there is provided a drilling head (1) having at least two grooves (3) connected with the helical groove provided in the stem. A plurality of bits is provided in the end surface (2) of the head (1). The bits include a centering member (6) with a tip (7) that coincides with the drill axis, at least two circumferential bits (4) arranged diametrically opposite with respect to the tip (7) and axially offset relative thereto. The centering member (6) is plate-shaped and is secured in a groove (12) communication with at least one of axial grooves (3). The centering member (6) also includes a central bit (8) encompassing the tip (7). The central bit (8) extends along the groove (12) and forms with one of the circumferential bits an angle from 30° to about 150°.

German Publication DE-40 12 772 A1 discloses a drill head (1) with a one-piece, hard metal insert (2) with four radially extending bits (5) and a centering tip (4). A groove (6) is formed between the tip (4) and each of two diametrically opposite with respect to tip (4), bits (5).

The Commissioner is hereby authorized to charge the fee, in the amount of \$180.00 and any other further fees, which may be required under 37 C.F.R. §1.17(p), to our Deposit Account No. 50-0955.

Respectfully submitted,

Alexander Zinchuk
